

Tablet/Pill Shaver

Grinds (shaves) one or more tablets into a powder with the turning of a handle so that medication can be mixed in food or in a liquid and given more easily to some pets.

The HURST Tablet Shaver ("PILLVERIZER") is a convenient hand held device to effortlessly reduce tableted medication into a fine quick dissolving powder in seconds, collected in a snap-in medication cup (three cups included with purchase).

Originally designed for dysphagic and tube-fed hospital patients, the PILLVERIZER is ideal for people (seniors and pediatrics), and is particularly effective for safely and quickly dosing companion animals. The PILLVERIZER provides a full delivered dose whenever there is difficulty in swallowing or administrating tablet medication.

The PILLVERIZER is constructed with 100% FDA approved materials and dyes, is top rack dishwasher safe, and easily converts for left hand usage.

PILLVERIZERS are a unique professional related premium for pediatric, geriatric or veterinary use. Custom imprinting and packaging is available.

PILLVERIZERS are designed for single patient use only to prevent cross contamination. Some medications are not suitable for powdering. Check with your doctor, pharmacist or veterinarian.
